Professional Experience

i-exceed Technology Solutions Pvt. Ltd.

Software Engineer

August 2025 – Present

- Working on banking and financial application features using Flutter and Dart, integrating RESTful APIs to enable seamless communication with backend services.
- Implemented robust form validations, and secure data handling to ensure compliance and reducing manual errors.
- Managed application state using BLoC architecture, handled API responses, data mapping, and error handling to deliver stable and scalable functionality.
- Fixed critical bugs, optimized app performance, and collaborated with UI/UX designers, backend developers, and QA teams to enhance overall user experience and application reliability.

Projects

Phishing Attack Detection

2025

- Developed an advanced phishing detection system using machine learning, deep learning, and large language models (LLMs) with Retrieval-Augmented Generation (RAG) by analyzing URLs, screenshots, and web page HTML code to identify and detect fraudulent or malicious websites.
- Implemented RAG to provide accurate, explainable detection, improving model reliability and reducing false positives.
- Authored a research paper detailing the proposed approach, experimental results, and performance improvements.

Price Tracking System | Html, CSS, Flask, Data Scraping, SQL

2024

- Developed a comprehensive price tracking system for monitoring Amazon product prices, implementing user authentication, product price tracking, and alert functionalities using Flask, HTML, and CSS.
- Utilized web scraping techniques to fetch real-time pricing data, enabling users to set up alerts for price changes and providing error handling for incorrect credentials.
- Included graphical representations of price trends to give users a clear view of price changes over time.

Employee Churn Prediction

2023

- Developed a machine learning project to predict employee churn, focusing on enhancing model accuracy and robustness.
- Applied EDA techniques and implemented SMOTE for systematic class imbalance correction, improving model robustness.
- Employed diverse ML algorithms (KNN, Decision Tree, Logistic Regression, SVM) customized for each dataset.
- Prioritized model robustness over raw accuracy, ensuring reliable predictions for real-world scenarios.

Bus Management System | Java Swing, JDBC, PostgreSQL

2022

- Developed a Java Swing bus management system with PostgreSQL backend, implementing CRUD operations for buses, routes, schedules, and passengers.
- Enabled efficient administration of records and tasks by integrating seamless CRUD functionalities, enhancing productivity through an intuitive UI and robust backend operations.

Skills

Programming Languages

Technical Skills-Flutter, Dart, C++, Python, Java, HTML, CSS, JavaScript, SQL, Machine Learning, Large-Language-models, Data Science

Soft Skills

Time Management, Strategic thinking, Adaptability, Decision Making, Leadership

Education

Bachelors in Computer Science Engineering

Amrita Vishwa Vidyapeetham (CGPA: 8.3)

2021 – 2025 | Amritapuri, Kerala

Intermediate

Narayana Junior College (Percentage: 93%)

2019 – 2021 | Vijayawada, Andhra Pradesh

Secondary Education

Dr. K.K.R Gowtham Concept School (GPA: 9.5)

2019 | Gudivada, Andhra Pradesh

Curricular Activities

- Contributed to a Student Social Responsibility project by explaining the different branches of computer science to students, providing them with a broader understanding of the field and helping them identify areas of interest for further exploration.
- Authored a blog detailing Exploratory Data Analysis (EDA) on online sales using synthetic dataset.
